

Get Started with MongoDB

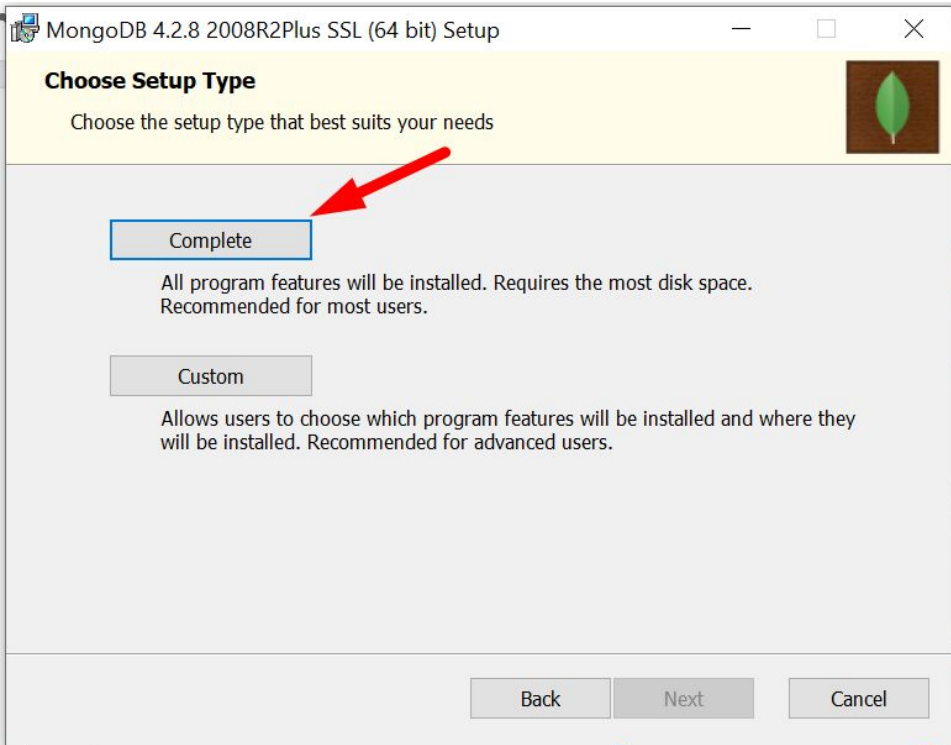

Outline

- **Setup MongoDB**
- What is NoSQL and MongoDB
- Setup MongoDB Cloud
 - Access it with MongoDB Compass

Install MongoDB on Windows

- Official Setup Guide
- Download installer
 - https://www.mongodb.com/try/download/community?tck=docs_server
- Run the installer
 - Choose complete setup type
 - No need to install it as a service
 - Use default value for other settings

Install MongoDB on Windows

Run MongoDB Service on Windows

- Run the service

- Create a folder in C drive **c:\data\db**
- Add bin folder as an entry in environment variable **Path**. For version 4.4, use

`C:\Program Files\MongoDB\Server\4.4\bin`

- Start a new command line, and run following commands

`mongod --version`

`mongo --version`

Setup MongoDB on Mac

- [Official Setup Guide](#)
- Install Homebrew
- Install MongoDB

```
brew tap mongodb/brew  
brew install mongodb-community@4.4
```

- Start/Stop Service

```
brew services start mongodb-community@4.4  
brew services stop mongodb-community@4.4
```

Running MongoDB

- MongoDB installation brings 2 executable, ``mongod`` and ``mongo``
- `mongod`
 - The primary daemon process for the MongoDB system
 - Handles data requests, manages data access and performs background management operations.
- `mongo`
 - The command-line shell that connects to a specific instance of ``mongod``

Running MongoDB

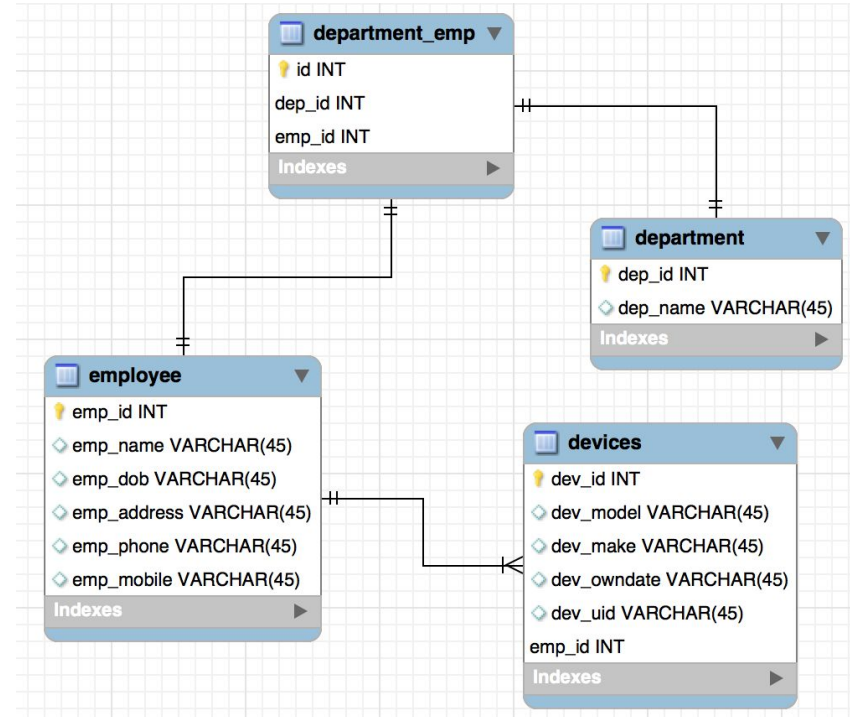

- In a new command prompt, run `mongod` to run a mongo server demon. Leave it running.
- In another command prompt, run `mongo` shell command to interact with server.
 - > help
 - > show databases
 - > use demo
 - > db
 - > db.createCollection('Students')
 - > db.Students.insertOne({name: "Ah Boy", age: 12, subjects: ["Maths", "English"]})
 - > db.Students.find()

Outline

- Setup MongoDB
- **What is NoSQL and MongoDB**
- Setup MongoDB Cloud

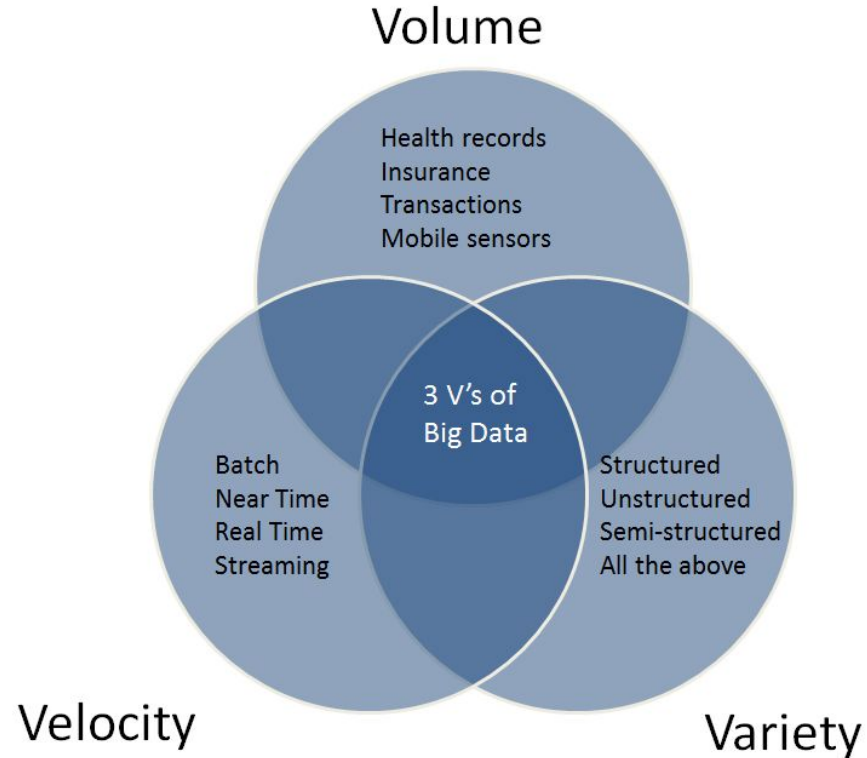

Relational Databases

- Highly structured data
- ACID Requirements
 - (Atomicity, Consistency, Isolation, Durability)
 - Emphasize on data integrity and reduce anomalies
- Complex queries and reports

NoSQL Databases

- “Not Only SQL”
- Why NoSQL gains popularity?
 - Flexible Data Requirements
 - Rapid Data Growth and Scalab
 - Concurrent Performance

Types of NoSQL Database

Document

Graph

Key-Value

Wide-column

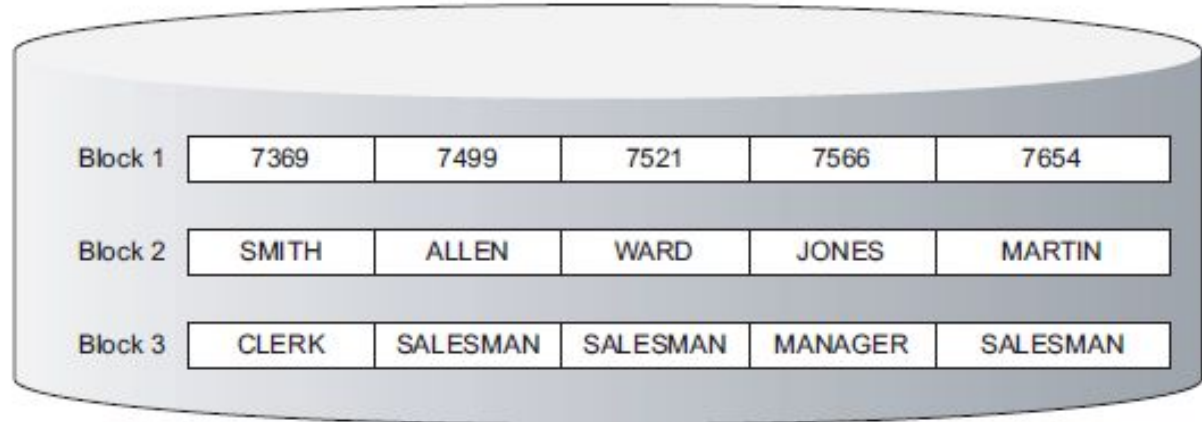

Wide-Column Databases

EmpNo	EName	Job	Mgr	HireDate
7369	SMITH	CLERK	7902	17/12/1980
7499	ALLEN	SALESMAN	7698	20/02/1981
7521	WARD	SALESMAN	7698	22/02/1981
7566	JONES	MANAGER	7839	2/04/1981
7654	MARTIN	SALESMAN	7698	28/09/1981
7698	BLAKE	MANAGER	7839	1/05/1981
7782	CLARK	MANAGER	7839	9/06/1981

Logical Schema

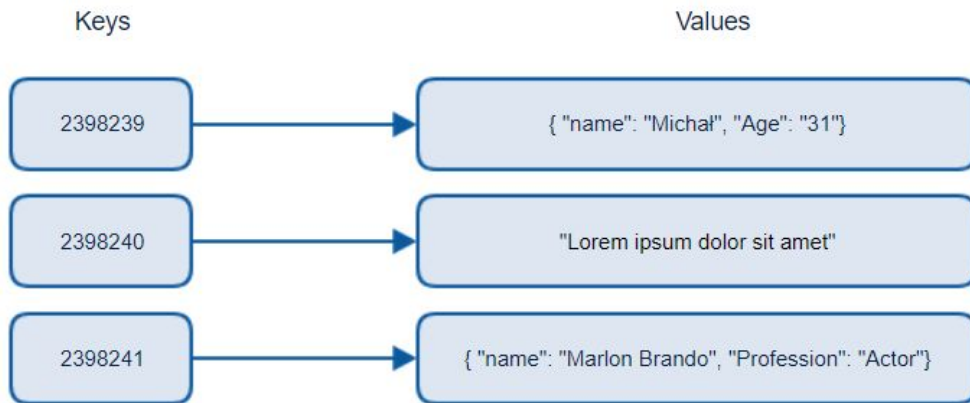

- Allow selection of a field easily
- Good for reporting

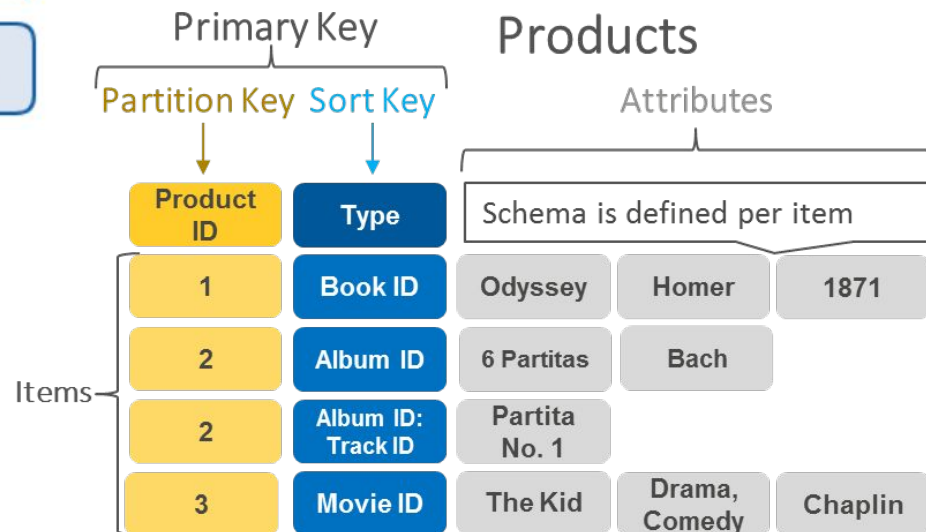

Column Store physical layout

Column Database stores column values together

Key-Value Databases

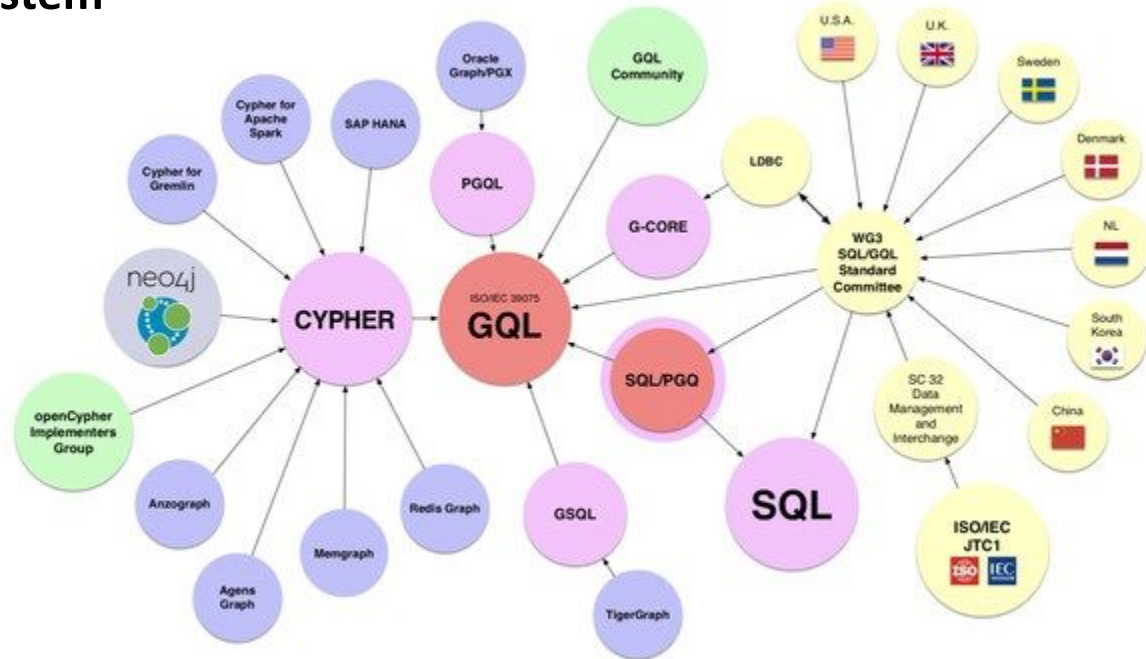

- Each record is a key-value pair
- Used in file system, object storage for archiving
- E.g. AWS S3, Google Cloud Storage, Azure Cosmos DB

Graph Database

- Application in knowledge graph, network structure, social network graph, recommendation system

NoSQL Databases

Document

Graph

Key-Value

Amazon DynamoDB

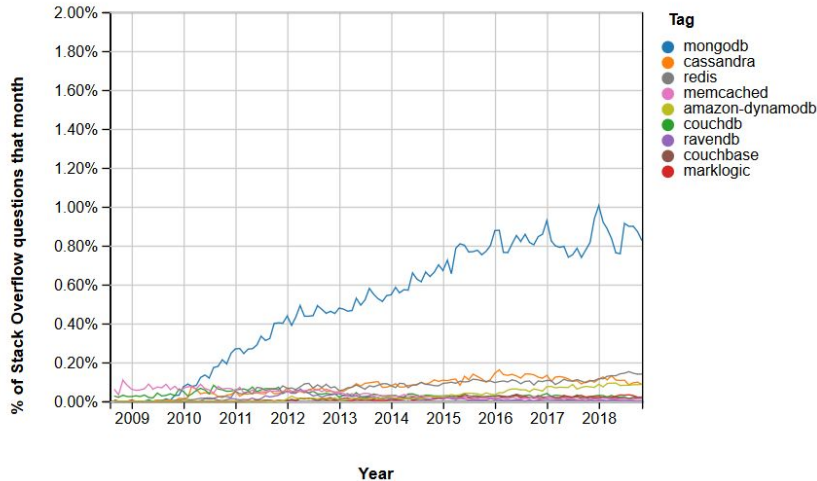

Wide Column

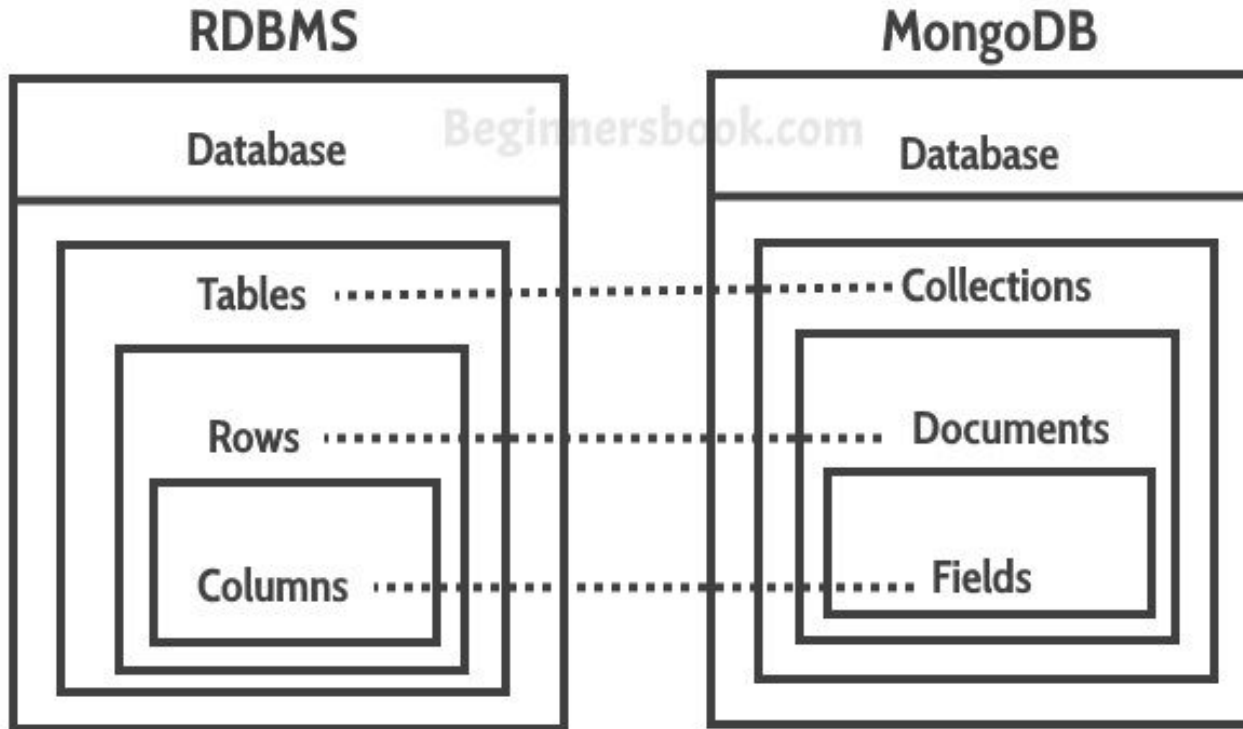

What is MongoDB

- A cross-platform, document oriented NoSQL database
 - Each key pairs with a document
 - Each document is a complex data structure

Mapping Relational to MongoDB

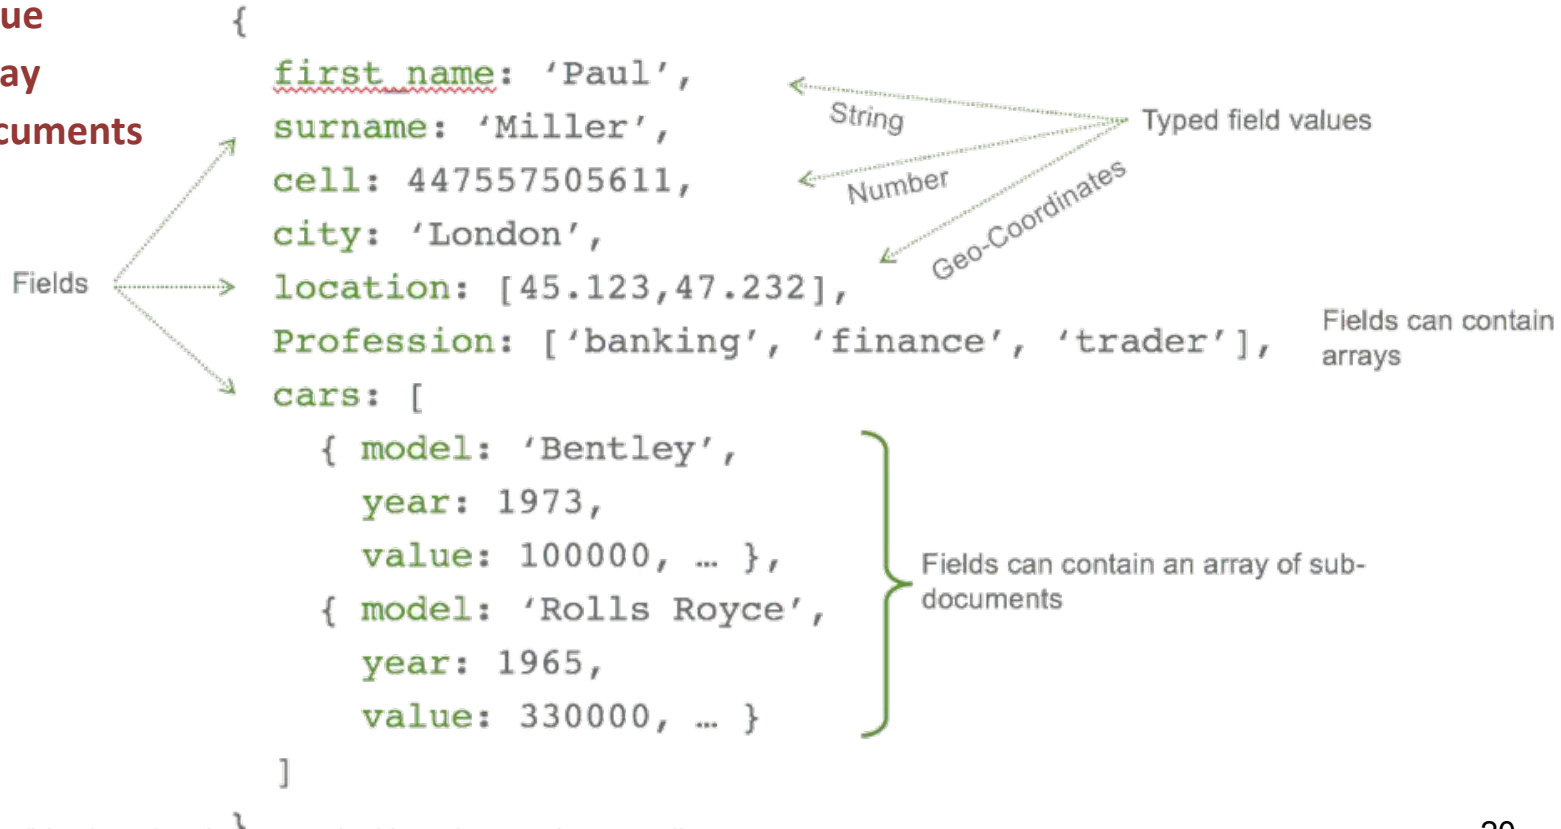

MongoDB Document

- **_id**
 - Field name **_id** is reserved for use as a primary key
 - Must be unique in the collection and immutable
 - **Key-value**
 - **Key-array**
 - **sub-documents**
- ```
{
 "_id" : ObjectId("5ce931fe18383670514bfacf"),
 "title" : "Interstellar",
 "director" : "Christopher Nolan",
 "year" : 2014,
 "budget" : 1650000000,
 "genre" : [
 "Adventure",
 "Drama",
 "Sci-Fi"
],
 "stars" : [
 {
 "name" : "Matthew McConaughey",
 "birthYear" : 1969,
 "nationality" : "American",
 "wonOscar" : true
 },
 {
 "name" : "Anne Hathaway",
```

# Another Document

- Key-value
- Key-array
- sub-documents

# Table vs Collection

- Document schema is flexible

## Relational Database

| Student_Id | Student_Name | Age | College       |
|------------|--------------|-----|---------------|
| 1001       | Chaitanya    | 30  | Beginnersbook |
| 1002       | Steve        | 29  | Beginnersbook |
| 1003       | Negan        | 28  | Beginnersbook |

## MongoDB

```
{
 "_id": ObjectId("....."),
 "Student_Id": 1001,
 "Student_Name": "Chaitanya",
 "Age": 30,
 "College": "Beginnersbook"
}
{
 "_id": ObjectId("....."),
 "Student_Id": 1002,
 "Student_Name": "Steve",
 "Age": 29,
 "College": "Beginnersbook"
}
```

# Outline

---

- Setup MongoDB
- What is NoSQL and MongoDB
- **Setup MongoDB Cloud**
  - Access it with MongoDB Compass

# MongoDB Cloud

---

- A fully managed cloud database.
- Register account
  - Go to <https://www.mongodb.com/cloud>
  - Click on “Try MongoDB Cloud Now”
  - Sign up using Google account or email

# Create a Free Cluster

---

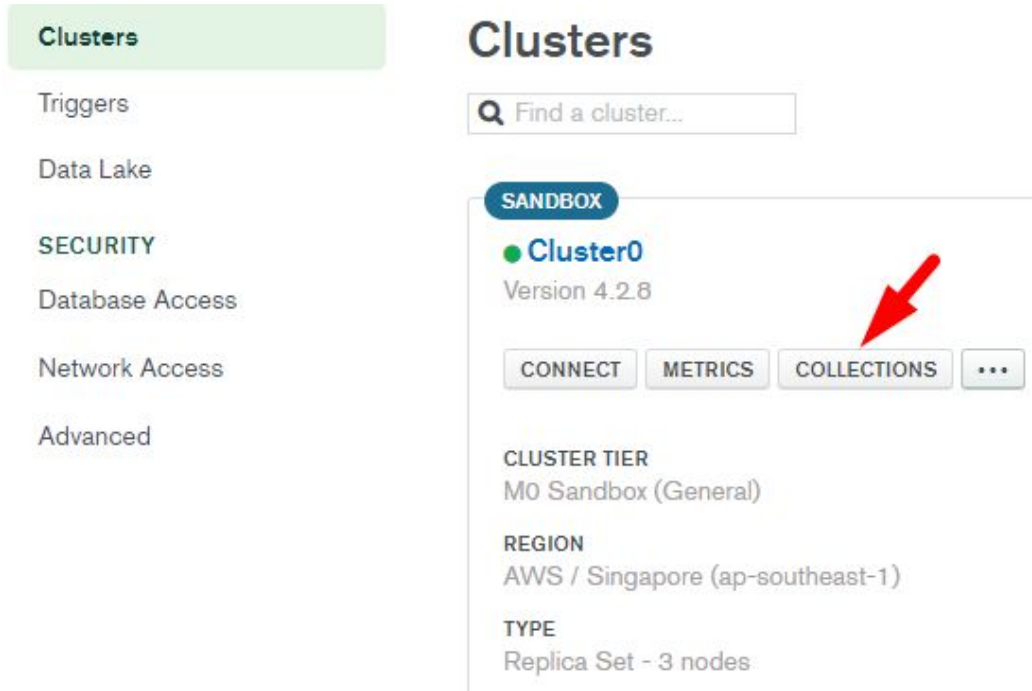

- Create a cluster free shared cluster
  - Pick a cloud provider and choose a region in Singapore or nearby
- Create a database user
  - Choose “Password” authentication method
  - Allow “Read and write to any database” privileges

Note: it will take a while for cluster to be created.

# Create Database and Collection (1/3)

- A cluster can contain multiple databases. Each database can contain multiple collections (aka tables)

# Create Database and Collection (2/3)

- Click on “Add My Own Data”.

## Explore Your Data

- **Find:** run queries and interact with documents
- **Indexes:** build and manage indexes
- **Aggregation:** test aggregation pipelines
- **Search:** build search indexes

Load a Sample Dataset

Add My Own Data

# Create Database and Collection (3/3)

---

- Create a database “demo” and a collection “students”

Create Database

DATABASE NAME ⓘ

demo

COLLECTION NAME ⓘ

students

☐ Capped Collection

Before MongoDB can save your new database, a collection name must be specified at the time of creation.

Cancel

Create

# Setup Connection

- Go back to Clusters; Click on CONNECT for Cluster0

The screenshot displays the 'Clusters' management page. On the left is a sidebar with navigation links: Clusters (highlighted), Triggers, Data Lake, SECURITY, Database Access, Network Access, and Advanced. The main content area is titled 'Clusters' and includes a search bar labeled 'Find a cluster...'. Below the search bar, a 'SANDBOX' tab is active, showing 'Cluster0' with a green status dot and 'Version 4.2.8'. A red arrow points to the 'CONNECT' button among other options like 'METRICS', 'COLLECTIONS', and a menu icon. Below the buttons, the cluster details are listed: 'CLUSTER TIER' as 'M0 Sandbox (General)', 'REGION' as 'AWS / Singapore (ap-southeast-1)', and 'TYPE' as 'Replica Set - 3 nodes'.

# Network Access

- IP Whitelist is the list of IPs which can connect to database
  - For security, it is recommended to limit the IP addresses, e.g. your company IP range
  - For practice purpose, we will allow access from anywhere

## Add IP Whitelist Entry

Atlas only allows client connections to a cluster from entries in the project's whitelist. Each entry should either be a single IP address or a CIDR-notated range of addresses. [Learn more.](#)

ALLOW ACCESS FROM ANYWHERE

Whitelist Entry:

0.0.0.0/0

Confirm

# Database Access

- Wizard helps you to generate connection string
  - Choose to generate connection string for MongoDB Compass

# Connection String

- Copy the generated connection string
  - mongodb+srv://<username>:<password>@cluster0.30mjb.mongodb.net/

✓ Setup connection security > ✓ Choose a connection method > Connect

I do not have MongoDB Compass

I have MongoDB Compass

1 Choose your version of Compass:

1.12 or later

*See your Compass version in "About Compass"*

2 Copy the connection string, then open MongoDB Compass.

mongodb+srv://emma:<password>@cluster0.30mjb.mongodb.net/test

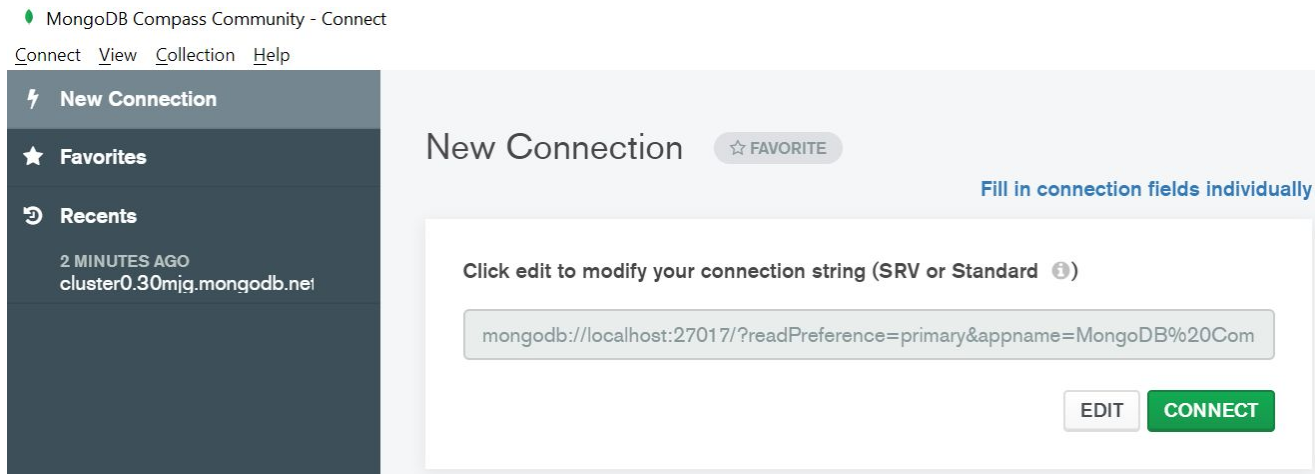

Copy

MongoDB Compass will auto-detect the connection string you copied. To connect, enter your database username and password into the corresponding fields when prompted.

When entering your password, make sure that any special characters are [URL encoded](#).

# MongoDB Compass

- Start MongoDB Compass
  - Replace username & password in connection string

# Create Database

- Create a new database “leisure” with first collection named “tvshow”.

# Setup Connection

- Choose correct driver and version; copy code example

✓ Setup connection security

✓ Choose a connection method

Connect

1

Select your driver and version

DRIVER

Python

VERSION

3.6 or later

2

Add your connection string into your application code

☒ Include full driver code example

```
client = pymongo.MongoClient("mongodb+srv://emma:<password>@cluster0.
db = client.test
```

Copy

Replace **<password>** with the password for the **emma** user. Replace **<dbname>** with the name of the database that connections will use by default. Ensure any option params are [URL encoded](#).
